

AthletixOS — Smoke Test

Post-deploy validation · June 30, 2026 · run top-to-bottom

This validates the fixes that just shipped. Work top to bottom — the order roughly matches how a real club is set up and used. Tick each box as you confirm it. Anything that fails, note the section number and send it over.

Before you start • Confirm the latest Netlify deploy shows **Published** with your newest commit, then hard-refresh the app (Cmd/Ctrl-Shift-R). • Have a guardian email you can open (use a +alias on a real inbox). • Have a phone set to **dark mode** for the dropdown + nav checks.

1 Staff permissions & deletion

- ☐ **A staff member with Events = Full can delete an event**
Previously blocked with “unauthorized” — this was the core staff-permission bug.
- ☐ **Same for: a class (Classes = Full), a product & a membership (Events = Full), a member (Members = Full), a message group (Messaging = Full)**
Each destructive action now works for staff who have full access to that area.
- ☐ **As the owner, all of the above still work**

2 Staff sign-in & password

- ☐ **Club/Staff login → “Forgot password?” pre-fills the club; a staff email gets a reset email**
The link now carries the club through so the field isn’t blank.
- ☐ **On the reset page, typing the club’s NAME (not the slug) still finds it and sends**
This was the root cause of “forgot password never worked” for staff.
- ☐ **An expired/used staff setup link shows a recovery option (resend / email a fresh link)**
No more dead-end “Invalid or expired token” screen.

3 Private lessons (staff side)

- ☐ **On a confirmed private, “Approve booking” and “Mark lesson completed” are clearly separate**
Wording was confusing before.
- ☐ **Mark a lesson completed by mistake → a “Reopen” button returns it to Confirmed**

4 Dropdowns (phone in dark mode)

- ☐ **Open the Messages “To” recipient dropdown → it’s readable (light), not a dark popover**
One CSS fix covers every native dropdown across staff + client. Spot-check a couple more.

5 Member status

- ☐ A member who is **ACTIVE** but has no plan shows a “No membership” / “no plan” chip
Check both the members list and the member’s detail page (your Jason Doe note).

6 Messaging — member ↔ coach

- ☐ As a guardian, message a coach **ABOUT** a child → on the coach/owner side it’s its own “For {child}” thread
Previously a parent’s message about a kid was hidden behind their own thread — the “missing message.”
- ☐ Reply from the coach side → it stays on that child’s thread
- ☐ Member portal: the Messages tab shows a red unread badge; it clears after opening Messages

7 Manage a booking (client)

- ☐ Member → Bookings → an upcoming private → “Manage booking” → Cancel with a reason → it cancels + the coach is notified
- ☐ Try “Request a time change” instead → the coach receives the request

8 Attendance payments

- ☐ Take attendance on a drop-in → choose Cash / Check / Credit and tick “Email a receipt” → it records and the member gets a receipt email
Cash/Check/Credit are new; Comp and Invoice still there.

9 Event invoicing — all event types

- ☐ Create a Clinic (then a Camp, a hosted Tournament, an “Other” event) → each shows a “Shared cost & invoicing” section with Estimated / Official posting
Previously only away (ATTEND) tournaments had this.

10 Multiple owners

- ☐ Members → Staff → Add staff → Account type = Owner → invite. They show with an “Owner” badge, can get a setup link resent, and sign in with full access

11 Family — manual 2nd child

- ☐ With a guardian who already has a portal login, add a 2nd child manually using that guardian's email → log in as the guardian → the new child appears in their profile switcher immediately
Fixes "2nd child added manually didn't show for the guardian."

12 Co-guardian invite by email

- ☐ On a child → "Add another guardian" → enter an email with NO account → they get an activation email; after they set a password, approve them under Members → Approvals
Previously it told you to have them sign up first.

13 Member invites

- ☐ Member portal → Profile → "Invite someone to the club" → enter an email → they receive the club's branded join link

14 Mobile navigation

- ☐ On a phone, scroll down a long page → the bottom nav slides away; scroll up → it returns; near the top it's always visible. No overlap with content

15 Privates location

- ☐ The member Bookings page has a "Request a private" button that opens the privates request flow; privates are viewed/managed from Bookings
Makes Bookings the single starting point without a disruptive nav change.

16 Cash/check onboarding (already live — confirm)

- ☐ A member onboarded via an activation link who chose Cash or Check appears under Members → Approvals as "Membership billing — Paying by cash/check"; "Approve & start membership" activates them
This path already worked — confirming it so your merge isn't blocked on cash/check.

17 Regression & build

- ☐ Owner & staff login, navigation, and permission gating are unchanged
- ☐ Existing card-paying members can still open billing and request cancellation
- ☐ Booking a class/event and requesting a private still work for self and child
- ☐ Build gate: `npx tsc --noEmit` and `npm run build` both pass

Planned next (not in this build): in-portal cash/check for a brand-new membership purchase by an existing member, cash/check for private packs + "save card for future use only," and reassigning a purchase from a booking's edit. None block today's testing.
